

VENKATESH S

B.Tech Computer Science and Engineering

04venkateshs@gmail.com — +91 9895644373 — [linkedin.com/in/venkatesh-s-5665-](https://www.linkedin.com/in/venkatesh-s-5665-) — github.com/venkateshs2004 — Palakkad, India

ABOUT ME

Computer Science student with strong programming skills in C++ and Python. Proficient in developing efficient applications and working within Linux-based environments. Experienced in building logical backends and utilizing version control systems like Git. Dedicated to writing clean, optimized code and solving complex algorithmic problems.

EDUCATION

Year	Degree/Exam	Institute	Score
2022–Present	B.Tech CSE	Mar Athanasius College of Engineering	8.23
2022	Class XII (CBSE)	Sainik School Kazhakootam, Trivandrum	91.2%

TECHNICAL SKILLS

Programming Languages:	C++ (Strong Proficiency), Python, C, Dart
Core Concepts:	Data Structures & Algorithms, OOPs, Memory Management, Linux Environment
Tools & Platforms:	Git, Docker, VS Code, Linux Shell (Bash)
Web & Scripting:	Flask (Python), HTML, CSS, Flutter
Soft Skills:	Analytical Thinking, Debugging, Problem Solving, Collaboration

EXPERIENCE

Web Development Intern [2025]

Codescape, Kochi, India

- Developed backend logic and database structures for a dynamic alumni portal.
- Optimized data retrieval queries, reducing load times and improving application performance.
- Collaborated with the team using version control (Git) to manage code and merge features seamlessly.

PROJECTS

Protein Structure Visualisation [2024]

Stack: Python, Docker, Linux Environment

- Developed a computational tool to predict and render 3D protein structures using AI models.
- Utilized Docker to containerize the application, ensuring compatibility across different Linux environments.

WellNess [2024]

Stack: Python (Flask), MongoDB, NLP

- Built a backend using Python (Flask) to manage user sessions and database interactions.
- Integrated Natural Language Processing (NLP) algorithms to analyze user input and provide automated responses.

Voxcue [2025]

Stack: Flutter, Agentic AI

- Engineered a complex logic layer using Agentic AI to process sequential user tasks, focusing on efficient state management.

ACHIEVEMENTS & CERTIFICATIONS

- Programming Data Structures and Algorithms using Python (NPTEL): Certified proficiency in algorithmic problem solving.
- Hands on Cloud Computing (AWS): Experience with cloud infrastructure and deployment.
- 3rd Runner-up: HACKEFX - National Level Hackathon by Electrifyx.
- Design Thinking Practitioner (IBM).

POSITIONS OF RESPONSIBILITY

- Co-Director, ENCIDE MACE: Organized coding events and technical sessions.
- CTO, IEDC MACE: Managed technical requirements for innovation projects.
- Lead, DSC MACE: Led community development projects and workshops.
